

Financial Performance Summary

The overall market environment has a significant influence on IFC's financial performance. The main elements of IFC's net income and other comprehensive income, and influences on the level and variability of net income and other comprehensive income from year to year are:

Main Elements of Net Income and Other Comprehensive Income

ELEMENTS	SIGNIFICANT INFLUENCES
Net income:	
Yield on interest earning assets (principally loans)	Market conditions including spread levels and degree of competition. Nonaccruals and recoveries of interest on loans formerly in nonaccrual status, and income from participation notes on individual loans are also included in income from loans.
Liquid asset income	Realized and unrealized gains and losses on the liquid asset portfolios, in particular the portion of the liquid asset portfolio funded by net worth, which are driven by external factors such as the interest rate environment and liquidity of certain asset classes within the liquid asset portfolio.
Income from the equity investment portfolio	Global climate for emerging markets equities, fluctuations in currency markets and company-specific performance for equity investments. Overall performance of the equity portfolio.
Provision for losses on loans, guarantees, and available-for-sale debt securities	Risk assessment of borrowers, probability of default, loss given default, and expected balance at default considering prepayment and disbursement assumption estimates as well as expected utilization rates.
Other income and expenses	Level of advisory services provided by IFC to its clients, the level of expense from the staff retirement and other benefits plans, the approved and actual administrative expenses, and other budget resources.
Gains and losses on other non-trading financial instruments accounted for at fair value	Principally, differences between changes in fair values of borrowings, excluding IFC's credit spread and associated derivative instruments and unrealized gains or losses associated with the investment portfolio including puts, warrants, and stock options, which in part are dependent on the global climate for emerging markets. These securities may be valued using internally developed models or methodologies, utilizing inputs that may be observable or non-observable.
Other comprehensive income:	
Unrealized gains and losses on debt securities accounted for as available-for-sale	Global climate for emerging markets, fluctuations in currency and commodity markets and company-specific performance, and consideration of the extent to which unrealized losses are considered a credit loss. Debt securities may be valued using internally developed models or methodologies, utilizing inputs that may be observable or non-observable.
Unrealized gains and losses attributable to instrument-specific credit risk on borrowings at fair value under the Fair Value Option	Fluctuations in IFC's own credit spread measured against reference rate, resulting from changes over time in market pricing of credit risk. As credit spreads widen, unrealized gains are recorded, and when credit spreads narrow, unrealized losses are recorded.
Unrecognized net actuarial gains and losses and unrecognized prior service costs on benefit plans	Returns on pension plan assets and the key assumptions that underlay projected benefit obligations, including financial market interest rates, staff expenses, past experience, and management's best estimate of future benefit cost changes and economic conditions.

Net income for FY23 was \$672 million compared to a net loss of \$464 million in FY22, primarily driven by reversal of mark-to-market losses from the previous year and additional interest income in Treasury, as well as higher income from loans and debt securities. The \$1.1 billion increase in FY23 when compared to FY22 was principally a result of the following factors:

Change in Net Income FY23 vs FY22 (US\$ MILLIONS)

* Unrealized gains (losses).

** Total income from loans and debt securities and net treasury income are net of allocated charges on borrowings.

*** Others mainly represents foreign exchange gains/losses, service fees, and net advisory service expenses.

Equity investment portfolio returned \$191 million in FY23 compared to \$208 million in FY22. The FY23 return comprised dividends (\$164 million), realized gains on sales (\$161 million) and unrealized losses (\$134 million).

Net income from loans, debt securities and associated derivatives, net of allocated charges on borrowings, was \$1.6 billion in FY23 compared to \$1.1 billion in FY22. Unrealized gains from loans and debt securities were \$175 million in FY23 compared to unrealized losses of \$123 million in FY22. IFC recorded provisions for losses

of \$29 million in FY23 compared to \$140 million in FY22. Included in the FY22 provision was a qualitative overlay of \$135 million, which remained unchanged at FY23-end.

IFC reported income of \$241 million on liquid assets in FY23, net of allocated charges on borrowings, compared to a loss of \$521 million in FY22. The FY23 treasury income benefited from more favorable market movements.

IFC's administrative expenses were \$1.2 billion in FY23 compared to \$1.1 billion in FY22, an increase of \$73 million primarily driven by higher staff costs and higher travel expenses. Pension expenses decreased by \$48 million to \$214 million in FY23 from \$262 million in FY22.

IFC's net income or loss for the past three fiscal years are presented below:
